

Lamipak Sustainable Products

In recent years, the growing awareness in environmental protection, sustainable development and circular economy has made consumers more conscious about environmentally friendly products. This is why Lamipak launched LamiNatural and paper straws that can both protect the content inside our aseptic packaging for the consumers and the environment.

LamiNatural products consists of an external bio-based polymer coating and non-bleached white paper, which lowers carbon footprint during production and transportation.

At a closer look, the materials in LamiNatural are 100% recyclable, consumption of ozone is reduced by 9% compared with conventional products, the use of non-bleached paper reduces the application of chemicals, stress on natural resources is reduced by more than 10% and carbon footprint is 50% lower than our standard products.

LamiNatural is currently available in all Brick format below 500ml and in 1L standard, Brick Slim, and Square, but will expand into other formats.

Paper straws

PAPER STRAW

LAMIPAK

It is already well known, the number of discarded plastic straw has reached unprecedented levels, according to current forecasts, there will be more plastic than marine life in the oceans by 2050. In order to alleviate this growing problem, government organizations such as the European Union, issued a directive to ban the use of all plastic straws by July 2021. Lamipak paper straws can be one of the solutions in supporting this agenda. It consists of three layers of recyclable paper bonded together by a food-grade material glue that ensures the structure remains intact long enough for the liquid contents of the package to be consumed. It is 100% biodegradable, recyclable, and easily configured to be compatibility with the straw applicator. The paper straws can be applied to our formats in Brick Slim, Base, Leaf and Cuneiform.

Lamipak hopes these two products are the first of many more sustainable products in the belief that everyone will also contribute towards making packages sustainable in the future.
